

DNA GENOTYPING / PARENT VERIFICATION

All sires and donor dams are required to have a DNA profile on file prior to registration of progeny. If the animal is deceased and semen or other DNA source is available, the DNA profile is required.

Parentage Disputes

Whenever the eligibility for recording of any animal is in doubt because of uncertain or unknown parentage, parentage verification by the Association will be required.

Any application for registration after March 1, 1997 with a parentage dispute will not be registered until the dispute is solved. Those cattle that have an asterisk are grandfathered and stay in the breed with an asterisk; however, on future progeny, an asterisk would be noted through six (6) generations. All cattle with parentage disputes are ineligible for shows.

Under special circumstances DNA from multiple progeny may be used to construct a DNA profile for the parent.
